**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-18, drawn to method of determining presence of chronic volume dependent hypertension, classified in class 435, subclass 7.1, for example.
  - II. Claims 19-29, drawn to apparatus, classified in class 422, subclass 50, for example.
  - III. Claims 30-37, drawn to method of determining and treating the presence of chronic volume dependent hypertension, classified in class 436, subclass 516, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the method can be practiced using immunoaffinity chromatography.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In

Art Unit: 1641

the instant case the different inventions have different modes of operation, different functions, and different effects in that Invention I requires detecting protein concentration or phosphorylation to determine the presence of chronic volume dependent hypertension and Invention III requires determining CLAMP protein concentration or phosphorylation and therapeutic treatment of the hypertension in the presence of the CLAMP protein.

Inventions II and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus can be used for protein binding kinetic studies.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, because the search required for Group I is not required for Group II, and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper. Literature search for each method and apparatus is distinct since the structural requirements of each invention are different. While searches would be expected to overlap, there is no reason to expect the searches to be coextensive.
